HAWK RISK SOLUTIONS

Introducing the HRP-AT4 Global Roaming Tracking Device

A cutting-edge solution for comprehensive tracking and monitoring.

Advanced Tracking and Monitoring Device with GPS, LBS, and WIFI Positioning:

- ☑ Real time or periodic pinpoint location tracking for precise monitoring.
- ☑ IPX5 water and dustproof rating for reliable operation in challenging environments.
- ☑ Water resistant case ensures stability and performance in tough conditions.
- ☑ Listen-in function enables the ability to listen to surroundings by sending a text message.
- ☑ Tamper Alert feature provides immediate notification if the device is disassembled.
- ☑ Intelligent Power Management reduces inefficient power consumption during idle periods.
- ☑ High capacity 10,000mAh Li ion battery ensures a sufficient power supply.
- ☑ Strong magnet for secure attachment to vehicles or assets.
- ☑ Flexible mounting options with a cover for versatile application.

Enhanced Operational Security

The HRP-AT4 Global Roaming Tracking Device is designed to provide comprehensive security and tracking solutions for containers and trucks. It is specifically engineered to ensure the safe and secure transit of cargo.

Featuring a heavy duty combination lock with a pin code, this device offers robust protection during transportation. The Wireless Global Tracking Unit provides continuous monitoring through our advanced platform, allowing for coordinated updates and real time visibility of all consignments.

CROSS-BORDER MONITORING

With unauthorized vibration alerts, any movement or tampering attempts are immediately detected and reported to the platform. Global Roaming Sim Cards are utilized in all tracking devices, ensuring reliable monitoring both within South Africa and across international cross border routes.

TAMPERING PROOF

Equipped with a tampering device and tampering alert function, the Wireless Tracking Unit provides an additional layer of security. In the event of any attempt to remove the container lock, a tampering alert is promptly sent.

The platform offers a full playback function, enabling comprehensive tracking and review of routes taken. Additionally, it provides easy location sharing capabilities via various communication channels such as WhatsApp, SMS, and email.

With the HRP AT4 Global Roaming Tracking Device, you can have peace of mind knowing that your cargo is protected and monitored throughout its journey, with real time updates and efficient security measures in place.

HAWK RISK SOLUTIONS

Our tracking system provides a comprehensive range of features to meet the diverse needs of our clients. With provision for daily, weekly, and monthly updated reports, you can easily access and analyse data on your fleet's activities.

Designed for consignment tracking of high value cargo, our solution offers robust security measures to ensure the safety and integrity of your valuable shipments. The tracking unit is equipped with a powerful 10,000mAh battery, providing an impressive eight month battery span. To optimize battery life, the unit automatically enters standby mode when not in use, effectively conserving power.

For precise location tracking, the unit can be activated either by movement or tampering, or through a message sent via our platform. This flexibility allows you to effortlessly obtain the real time location information you need.

The battery of the tracking unit lasts up to twelve months when used solely for location verification. When it's time for recharging, the units can be easily recharged using an AC adapter, with battery levels monitored from our platform. This ensures that you are always aware of the battery status and can take proactive measures when necessary.

As part of our comprehensive service, we provide monitoring and advisory support to our clients. Our platform enables us to monitor battery levels and proactively notify you when a battery needs to be exchanged and recharged, ensuring uninterrupted tracking capabilities.

With our advanced tracking system, you can benefit from accurate and timely reports, extended battery life, and proactive monitoring, allowing you to effectively manage and secure your assets and consignments.

We highly recommend having spare tracking units available to facilitate the exchange of units with depleted batteries. This proactive approach ensures uninterrupted tracking capabilities and maintains the integrity of your monitoring system.

When tracking units are exchanged, our platform is promptly updated to ensure accurate monitoring of the correct units. This meticulous process guarantees that the tracking units in use are precisely recorded and accounted for, enhancing the reliability and effectiveness of our tracking system.

To ensure a seamless transition and adherence to strict protocols, specific procedures are followed during the exchange of tracking units. These protocols are carefully designed to maintain the security and accuracy of the tracking process, providing peace of mind and confidence in the system's performance.

Container locks and tracking units are primarily deployed on routes involving high value cargo to ensure comprehensive visibility and security throughout the transportation process. By employing these advanced technologies, we significantly reduce the risk of tampering or unauthorized access to containers, safeguarding the integrity and safety of your valuable assets.
